

# Software Requirements Specification (SRS) Document

**Project Name: Leave Management System and Events Management System**

**Team Number : 5**

**Team Members:**

- Ananthula Sai Ravichandra
- Krishiv Gupta
- Aditya Chandramouli
- Sai Aditya
- Chaitanya Thogata

## Brief Problem Statement

NGOs often face problems with managing leave requests and event planning efficiently. Manual processes can lead to miscommunication, scheduling conflicts, and administrative overhead. A digital Leave Management System and Event Management System will streamline these processes, ensuring better coordination, transparency, and ease of access for employees and administrators.

## System Requirements

**Technologies Used:**

- Frontend: React.js

- Backend: Node.js with Express.js
- Database: MongoDB
- Authentication: JWT-based authentication system
- Version Control: GitHub
- API Testing: ThunderClient
- Browser: Google Chrome / Firefox
- Nodemon: Server starting after changes to backend
- Additional Libraries: Mongoose for MongoDB interactions

## User's Profile

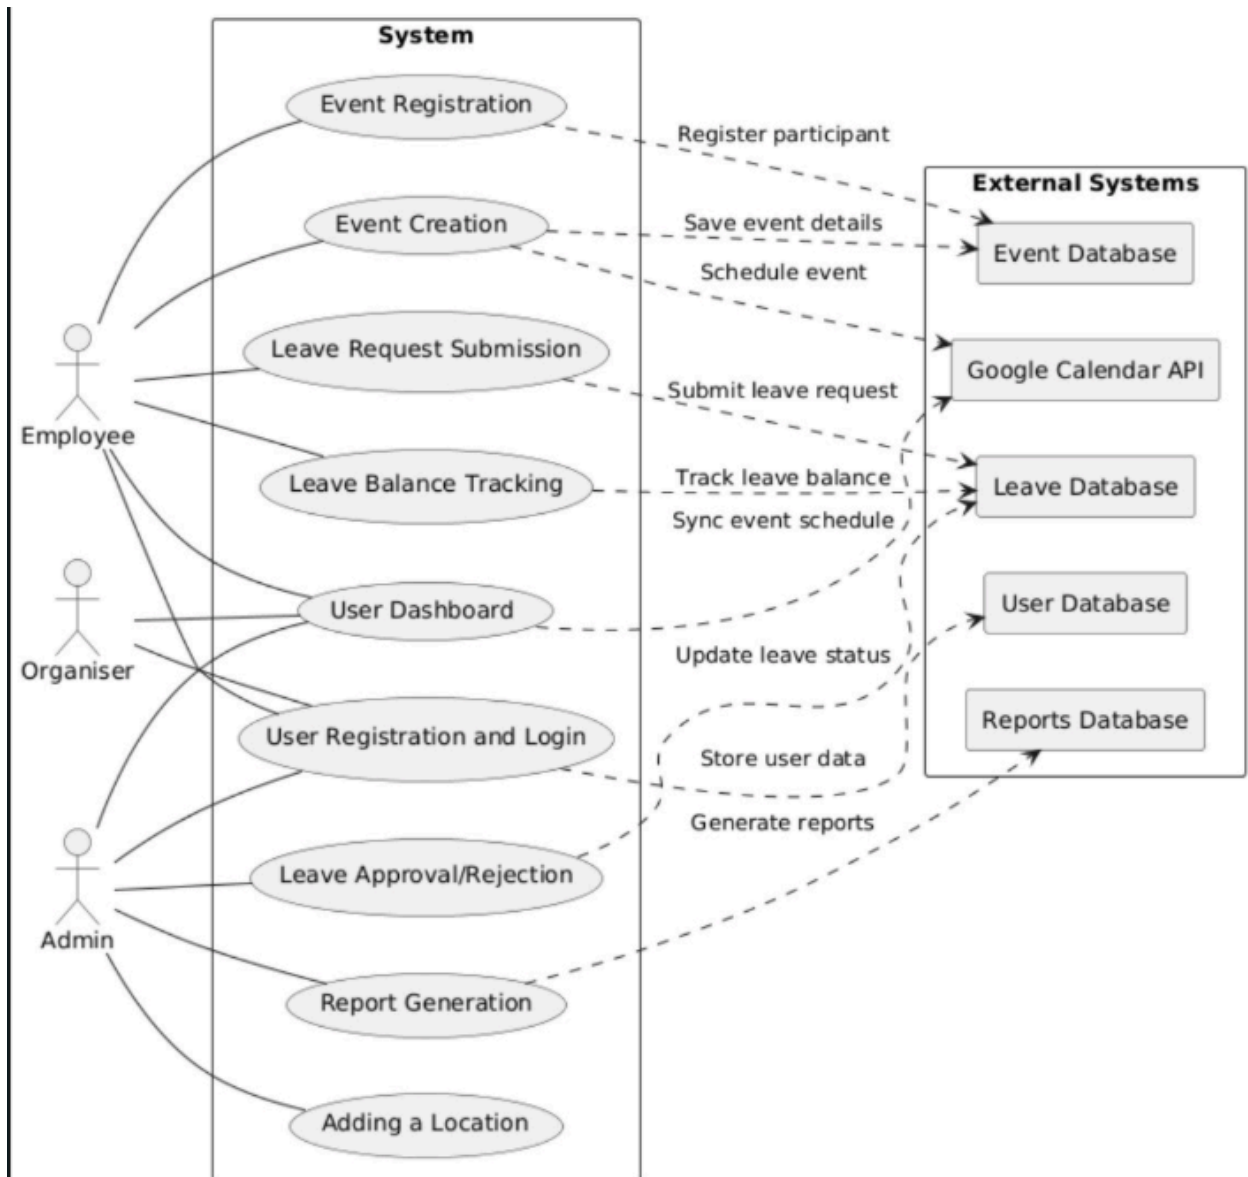

- **Admin:** NGO administrator responsible for approving leave requests, managing events, and generating reports. Familiar with basic computer operations.
- **Employee:** NGO staff member who submits leave requests and views assigned events. Moderate experience with web applications.
- **Volunteers:** External users who may need access to event-related information. Limited technical proficiency.

## Feature Requirements (Use Cases)

No.	Use Case Name	Description	Release
1	User Registration & Login	Users (Admin, Employee, Organizer) can register and log in.	R1
2	Leave Request Submission	Employees can apply for leave with details.	R1
3	Leave Approval/Rejection	Admin/HR can approve or reject leave requests.	R1

4	Leave Balance Tracking	Employees can view remaining leave balance.	R1
5	Event Creation	Event organizers can create and schedule events.	R2
6	Event Registration	Employees can register for events.	R2
7	User Dashboard	Users can view their leave history and upcoming events.	R2
8	Report Generation	Admin can generate reports on leaves and event participation.	R2
9	Adding a location	Allows to add new location to the organization	R2

## Use Case Diagram

## Use Case Description

<b>Use Case Number</b>	UC-01
<b>Use Case Name:</b>	User Registration & Login
<b>Overview</b>	Users (Admin, Employee, Event Organizer) can register and log into the system.
<b>Actors</b>	Employee, Admin, Event Organizer

<b>Precondition</b>	User must have valid credentials for login; for registration, they must provide valid details.
<b>Main Flow:</b>	<ol style="list-style-type: none"> <li>1. User enters required details (name, email, password, role).</li> <li>2. System verifies credentials and logs the user in.</li> <li>3. User navigates to the registration/login page.</li> <li>4. User is redirected to their dashboard.</li> </ol>
<b>Alternate Flows</b>	<ol style="list-style-type: none"> <li>1. If login fails, an error message is displayed.</li> <li>2. If registration fails (e.g., duplicate email), an error is shown.</li> </ol>
<b>Post Condition</b>	User is logged in and has access to system features.

<b>Use Case Number</b>	UC-02
<b>Use Case Name:</b>	Leave Request Submission
<b>Overview</b>	Employees can submit leave requests with details like start date, end date, and reason.
<b>Actors</b>	Employee, Admin
<b>Precondition</b>	Employee must be logged in
<b>Main Flow:</b>	<ol style="list-style-type: none"> <li>1. Employee navigates to the leave request page.</li> <li>2. Employee selects leave type, start date, end date, and provides a reason.</li> <li>3. Employee submits the request.</li> <li>4. System records the request and notifies the Admin.</li> </ol>
<b>Alternate Flows</b>	<ol style="list-style-type: none"> <li>1. If any field is missing, the system prompts the user to complete the form.</li> </ol>
<b>Post Condition</b>	Leave request is successfully submitted and stored.

<b>Use Case Number</b>	UC-03
<b>Use Case Name:</b>	Leave Approval/Rejection
<b>Overview</b>	Admin reviews and either approves or rejects leave requests.
<b>Actors</b>	Employee, Admin
<b>Precondition</b>	Leave request must exist in the system.

<b>Main Flow:</b>	<ol style="list-style-type: none"> <li>1. Admin logs in and navigates to the leave request list.</li> <li>2. Admin selects a pending leave request.</li> <li>3. Admin reviews details and chooses to approve or reject.</li> <li>4. System updates leave status and notifies the Employee.</li> </ol>
<b>Alternate Flows</b>	<ol style="list-style-type: none"> <li>1. If the request is rejected, the Employee is notified with a reason.</li> </ol>
<b>Post Condition</b>	Leave request status is updated.

<b>Use Case Number</b>	UC-04
<b>Use Case Name:</b>	Leave Balance Tracking
<b>Overview</b>	Employees can view their remaining leave balance.
<b>Actors</b>	Employee
<b>Precondition</b>	Employee must be logged in.
<b>Main Flow:</b>	<ol style="list-style-type: none"> <li>1. Employee navigates to the leave balance page.</li> <li>2. System retrieves leave data.</li> <li>3. System displays available leave balance.</li> </ol>
<b>Alternate Flows</b>	<ol style="list-style-type: none"> <li>1. If employee has an unused leave carry-forward policy, the system shows adjusted leave balance.</li> </ol>
<b>Post Condition</b>	Employee can view leave balance.

<b>Use Case Number</b>	UC-05
<b>Use Case Name:</b>	Event Creation
<b>Overview</b>	Event organizers can create events with details.
<b>Actors</b>	Event Organizer, Admin
<b>Precondition</b>	Event Organizer must be logged in.
<b>Main Flow:</b>	<ol style="list-style-type: none"> <li>1. Event Organizer navigates to the event creation page.</li> <li>2. Organizer enters event details (name, date, location, description).</li> <li>3. Organizer submits event.</li> <li>4. System saves the event and makes it visible to users.</li> </ol>

<b>Alternate Flows</b>	1. If required fields are missing, an error is displayed. 2. If an event already exists then the system throws an error
<b>Post Condition</b>	Event is stored in the system.

<b>Use Case Number</b>	UC-06
<b>Use Case Name</b>	Event Registration
<b>Overview</b>	Employees can register for events.
<b>Actors</b>	Employee, Event Organizer
<b>Precondition</b>	Event must exist in the system.
<b>Main Flow</b>	1. Employee navigates to the event list. 2. Employee selects an event and clicks "Register". 3. System records the registration.
<b>Alternate Flows</b>	1. If registration deadline has passed, the system prevents new registrations. 2. If the event is already full, the system places the user on a wait list.
<b>Post Condition</b>	Employee is registered for the event.

<b>Use Case Number</b>	UC-07
<b>Use Case Name</b>	User Dashboard
<b>Overview</b>	Users can view their leave history and upcoming events.
<b>Actors</b>	Admin , Employee
<b>Precondition</b>	User must be logged in.
<b>Main Flow</b>	1. User navigates to the dashboard. 2. System fetches and displays leave and event data.
<b>Alternate Flows</b>	1. If a user has pending approvals or registrations, they get a notification badge on the dashboard. 2. If the user has no leave requests or event registrations, the dashboard displays an empty state with guidance.
<b>Post Condition</b>	User can view relevant details.

<b>Use Case Number</b>	UC-08
<b>Use Case Name</b>	Report Generation
<b>Overview</b>	Admin can generate reports on leave and event participation.
<b>Actors</b>	Admin
<b>Precondition</b>	Admin must be logged in.
<b>Main Flow</b>	<ol style="list-style-type: none"> <li>1. Admin navigates to the reports section.</li> <li>2. Admin selects report type (leave history, event participation).</li> <li>3. System generates and displays the report.</li> </ol>
<b>Alternate Flows</b>	1. If Admin lacks the necessary permissions to generate reports, they see an "Access Denied" message.
<b>Post Condition</b>	Admin receives a detailed report.

<b>Use Case Number</b>	UC-09
<b>Use Case Name:</b>	Adding a location
<b>Overview:</b>	Allows to add new location to the organization
<b>Actors:</b>	Admin
<b>Precondition:</b>	Admin is authenticated.
<b>Main Flow:</b>	<ol style="list-style-type: none"> <li>1. The admin accesses the "Add Location" section from the dashboard.</li> <li>2. The system presents the "Add Location" form.</li> <li>3. The admin fills in the location details, including name, address, and contact information.</li> <li>4. The admin submits the form.</li> <li>5. The system verifies the provided details.</li> <li>6. The system stores the new location in the database.</li> <li>7. A confirmation message appears, confirming the successful addition of the location.</li> </ol>

<b>Alternate Flows:</b>	<p>1. If the admin provides incomplete or incorrectly formatted details (e.g., missing required fields or entering an existing location). It displays an error message, highlighting the incorrect fields, and prompts the admin to correct the input. The location is not saved, and the admin remains on the "Add Location" form until valid details are entered.</p> <p>2. If a database failure or connectivity issue occurs while saving the location it shows an error message indicating the issue and logs the error for troubleshooting. The location is not stored, and the admin is advised to retry later.</p>
<b>Post Condition:</b>	<p>The new location is successfully saved in the database and is available for use within the organization..</p>
